Go in 4 Hours

Published by **Pearson**

Beginner to intermediate

From Zero to Hero with Go Programming

What you'll learn Is this live event for you? Schedule

- Get up and running with Go in 4 Hours
- Understand how Go is different from other languages
- Learn the Go language syntax and how to build projects with best practices
- Build your first Go project

Go (golang) is a language that's unlike a lot of others. It feels like C, but reads and writes like Python. It allows a developer to take the core components (like pointers) of a low-level language (like C) and combine it with faster compile teams, easier to read syntax, and straight-forward code.

Go in 4 Hours teaches you the basics and gets you writing your first Go project in 4 hours. You learn the key concepts of the language and learn to work with Go. Experienced trainer Michael Levan provides hands-on examples throughout so you can see Go in action as you work your way through the course. You learn best practices along the way.

Next up for you

Go the Right Way

Learn Go Programming Language Skills with Real-World Live Demos and Code

> **View details**

What you'll learn and how you can apply it

By the end of the live online course, you'll understand:

- The basics and intermediate concepts of Go
- Go code best practices from a build and source control perspective
- How to start working with your first Go project to build a small app

And you'll be able to:

- Start working with Go on your own or at work
- Explain why Go is a great language and why it can change the game for your current environment
- Build open-source tools for yourself, your job, or the community

---

This live event is for you because...

- You want the ability to learn a new and exciting language
- You want to take your developer skills to the next level
- You want to either scale up your current job as a developer or get a new job as a developer

Prerequisites

- Basic programming concepts (1-2 years of coding experience)
- Knowledge of developer tools like IDEs, code editors like VS Code, GitHub, etc.

Course Set-up

- A GitHub account to store your code when running exercises
- Access to a decently powerful machine (for example, an I7 with 16 GB of RAM)
- A code editor like VS Code or similar

Recommended Follow-up

- Watch: Ultimate Go Programming, 2nd Edition by William Kennedy: https://learning.oreilly.com/videos/ultimate-go-programming/9780135261651/
- Read: The Go Programming Language, Alan A. A. Donovan, Brian W. Kernighan

https://learning.oreilly.com/library/view/the-go-programming/9780134190570/

Schedule

The time frames are only estimates and may vary according to how the class is progressing.

Segment 1: Go Intro (50 minutes)

- GitHub and Git
- Why Go is important and Go fundamentals
- Installing Go
- Strongly typed language
- Go is not object-oriented

Segment 2: Creating Your First Go Code (35 minutes)

- Creating a Go file
- Building a basic function

- Variables and constants
- Modules/directory structure

Break (10 minutes)

Segment 3: Functions, libraries and Conditionals (25 minutes)

- Function syntax
- Libraries
- Return types
- Writing functions and variable functions

Segment 4: Loops, arrays, and slices (30 minutes)

- Loops
- Breaks and continues
- Arrays vs slices in Go
- Creating and appending slices

Segment 5: Maps and structs (30 minutes)

- Creating, iterating, and updating maps
- Return types
- Writing functions and variable functions
- Creating and working with structs

Segment 6: Testing (20 minutes)

- Why test
- Unit testing
- Mock testing
- Integration testing
- Security testing

- Benchmark testing

Break (10 minutes)

Segment 7: Concurrency (20 minutes)

- What is concurrency
- Currency is programs
- Go's concurrency model (Goroutines)
- How to use Goroutines

QA (10 minutes)
