API resolved without sending a response for...this may result in stalled requests.

I have successfully implemented an API that inserts values into my MySQL database. However, when I test my API, I get the following:

```
API resolved without sending a response for /api/signUp?firstname=test&lastname=tester&email=test@g
```

I'm curious about what I can do to prevent this text from showing up every time new values are inserted.

Here is my `handleSubmit` function:

```
const handleSubmit = async (event: React.FormEvent<HTMLFormElement>) => {  
  event.preventDefault();  
  const data = new FormData(event.currentTarget);  
  let email = data.get("email");  
  let password = data.get("password");  
  let firstname = data.get("firstName");  
  let lastname = data.get("lastName");  
  console.log(firstname, lastname, email, password);  
  const response: any = await axios.post(`/api/signUp?firstname=${firstname}&lastname=${lastname}`,  
    console.log("response: ", response.data);  
};
```

Here is my API:

```
import type { NextApiRequest, NextApiResponse } from "next";  
import * as pool from "../../src/utils/dbConnection";  
import console from "console";  
  
export default async (req: NextApiRequest, res: NextApiResponse) => {  
  const { firstname, lastname, email, password } = req.query as any;  
  let conn;  
  try {  
    conn = await pool.getConnection();  
    conn.query(  
      `INSERT INTO Users(first_name, last_name, email, password) VALUES(?, ?, ?, ?)`,  
      [firstname, lastname, email, password]  
    );  
  }  
}
```

[Log In](#)

```
} catch (err) {  
  console.log(err);  
}  
} finally {  
  if (conn) conn.end(); // close connection  
}  
};
```

Any help is greatly appreciated. Thank you!

Setting the status of a response does not send the response in NextJS. Think about the response object and how you're meant to handle it.

Do I need to console log it? I understand what you're saying I'm just relatively uncertain about the proper methodology.
