

To suppress Prettier for a specific page or file in VS Code, you can use any of the following methods depending on your needs:

- **Use a `.prettiignore` file (Recommended):** Create a file named `.prettiignore` in your project's root directory and add the relative path to the specific page. This file follows the same syntax as `.gitignore`.
 - Example: `src/pages/MyPage.js`
- **Add a comment in the file:** To ignore an entire file, place the comment `// prettier-ignore` (or `/* prettier-ignore */` for CSS/SCSS) at the very top of the file. For HTML files, use `<!-- prettier-ignore -->`.
- **Save without formatting (One-time):** If you want to save a page once without triggering Prettier, use the VS Code Save without Formatting command:
 - **Windows/Linux:** `Ctrl + K`, then `Ctrl + Shift + S`.
 - **macOS:** `Cmd + K`, then `Shift + S`.
- **Use "Formatting Toggle" extension:** Install the [Formatting Toggle](#) extension from the [VS Code Marketplace](#). This adds a button to your status bar to quickly turn formatting on or off for your current session.
- **Language-specific settings:** If you want to disable Prettier for all files of a certain type (e.g., all HTML pages), you can modify your `settings.json`:

json

```
"[html]": {  
  "editor.formatOnSave": false  
}
```
