

Comparison of three **ONELINERS** which handle minus numbers case (input in a array):

```
var maxA = a.reduce((a,b)=>a.y>b.y?a:b).y; // 30 chars time complexity: O(n)
```

```
var maxB = a.sort((a,b)=>b.y-a.y)[0].y; // 27 chars time complexity: O(nlogn)
```

```
var maxC = Math.max(...a.map(o=>o.y)); // 26 chars time complexity: >O(2n)
```

editable example [here](#). Ideas from: [maxA](#), [maxB](#) and [maxC](#) (side effect of maxB is that array a is changed because sort is in-place).

Show_code_snippet

For bigger arrays the Math.max... will throw exception: *Maximum call stack size exceeded* (Chrome 76.0.3809, Safari 12.1.2, date 2019-09-13)
