react-console-emulator

npm	v5.0.2	license	MIT	downloads	984/week	minified size	30.3 kB	build	failing	coverage	100%
-----	--------	---------	-----	-----------	----------	---------------	---------	-------	---------	----------	------

A simple, powerful and highly customisable Unix terminal emulator for React.

[Live demo](#)[Configuration guide](#)[Command API](#)

Features

- Highly customisable: Add custom responses, restyle and tweak the terminal to your liking and much more.
- A Unix terminal in the browser: Accurately emulate a native Unix terminal in the browser with no setup required.
- Familiar shortcuts: The terminal can keep track of commands and allows the user to recall them at their behest.
- Easy and powerful command system: Execute code from your own application and send the results to the terminal output.
- Async output support: Push output to the terminal at any time, even after a command response has been emitted.
- Unlimited concurrency: Register as many terminals as you like with no risk of input confusion.

Usage

See more usage examples in [demo/extra/config.js](#) and [demo/App.jsx](#)

```
import React, { Component } from 'react'
import Terminal from 'react-console-emulator'

const commands = {
  echo: {
    description: 'Echo a passed string.',
    usage: 'echo <string>',
    fn: (...args) => args.join(' ')
  }
}
```

```
export default class MyTerminal extends Component {  
  render () {  
    return (  
      <Terminal  
        commands={commands}  
        welcomeMessage={'Welcome to the React terminal!'}  
        promptLabel={'me@React:~$'}  
      />  
    )  
  }  
}
```
